

to put safety first...

We aim to achieve 100% compliance with general and radiological, safety, health and environmental legislation.

All our on-site teams receive regular training in safety procedures.

We have more than 50 years proven experience in the safe application of industrial radioisotope technologies.

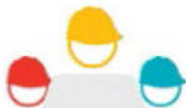

to deliver better service...

Our technicians are fully trained in the reliable and safe operation of scanning and detection equipment. They have the expertise to clearly interpret the measurement data to help you make the right decision.

Our people are flexible and easy to work with. They are committed to delivering the right result and will adapt to changes on site.

With 32 service locations around the world we can get to you wherever you are – quickly.

to employ the best people...

We provide regular training and development so you can be sure of safe, reliable and knowledgeable people.

We empower our people and encourage a 'can do' culture to make fast decisions that support our customer's commercial demands.

We invest in apprentices and university graduate support schemes to regularly bring new talent to our business.

to always use the best solutions...

We offer the widest range of scanning and tracer diagnosis services on the market.

Our people listen to our customers and will only make a recommendation for a service if it can deliver a positive result.

Developed by us and field proven in thousands of plants across the world you can rely on the data delivered by our technology.

to invest in the latest technology...

Tracerco pioneered scanning and tracer technology services developing its own unique technology to solve customer's problems.

We have a proud record of innovation. We won the UK Queen's award for technology in 2003 & 2009 and the IOP Innovation Awards in 2013 & 2015.

Our research and development team of more than 100 scientists and engineers is constantly developing better and more accurate techniques.

to respect the environment...

We are independently audited to the international environmental standard ISO 14001.

We aim to be more efficient with the resources we use and are working towards the vision Sustainability 2017, as defined by our parent company, Johnson Matthey.

We design new products and services which help our customers to be more sustainable and competitive.
